## MINI IMPLANT RETAINED DENTURE POST OP INSTRUCTIONS

- ❖ Recommended a dental cleaning of implants every 6 months – 180 days.
- ❖ O-Rings are to be changed out every 6-12 months.
- ❖ Recommended that you clean your mini implant retained denture with soap and water **twice** daily.
- ❖ Recommended that you clean your mini implants with an implant brush **twice** daily with antibacterial mouthwash.
- ❖ Wear the denture at night to prevent bruxism (grinding) and other occlusal forces on 1 or any of the implants.
  - This is so that the balls of the implants engage in the O-Rings of the denture to balance the bite.
  - To prevent any chaffing to the tongue, cheeks, and or lips from the implants.
